

What are the benefits of physical activity and how can I get my child involved?

Physical activity has been shown to improve fitness levels, decrease self-stimulating behaviors and enhance general motor function for individuals with ASD. Sports, exercise, and other physical activities can lead to improvements in symptoms, behaviors, mental health, and quality of life for individuals with autism.

- Explore different kinds of physical activity to determine the right fit for your child. Some activities to try include yoga, hiking, soccer, swimming, weight-training, baseball, martial arts, skiing, walking, bowling, skating and tobogganing.
- Keep It Simple. Before joining a program, buying specialized equipment, or paying for expensive memberships, try practical, daily adjustments: For example, getting enough sleep, drinking enough water, and eating several servings of fruits and vegetables every day. Try to increase the amount of walking by taking the stairs or getting off the bus one stop earlier. Look into free or reduced memberships, classes, or community offerings.
- Expand your definition of health to include more than just diet and exercise. A healthy lifestyle also involves understanding health conditions, scheduling medical appointments, managing medication.
- Find and connect to the professional supports, agencies, and resources that can help you and your child manage their health care needs.
